Hamburg, 6 November 2026

Letter of Recommendation

Guillaume Blanc Michel Gérard

I am pleased to recommend Guillaume Blanc Michel Gérard, who has been providing services to Gamelight GmbH as a Technical Support Specialist since September 2024, with our collaboration scheduled to conclude in December 2026. Gamelight is a Hamburg-based rewarded user acquisition platform for mobile apps, collaborating with game developers and publishers worldwide.

Throughout our collaboration, Guillaume has played an important role in supporting our mobile rewards platform, handling a broad range of responsibilities across Zendesk, including payment and payout operations, fraud reviews, and user verification. He consistently managed a high volume of incoming requests, handling thousands of tickets per month across multiple languages. He was among the most productive contributors to our support operations and maintained a high level of efficiency even during periods of particularly heavy workloads.

Beyond his core support responsibilities, Guillaume demonstrated strong technical initiative and problem-solving skills. He independently developed several internal tools that became part of the team's daily operations. These included an automated ticket triage and response system that replaced a third-party subscription service, analytics tools that helped identify product issues at an early stage, and an agent workspace (Support Desk) whose design was subsequently incorporated into our internal dashboard by the development team.

Following the departure of our Customer Support Team Lead, Guillaume also took on additional operational responsibilities, including Zendesk administration, payout approvals and reporting. He handled these responsibilities reliably and with a high degree of independence throughout the remainder of our collaboration.

Throughout our collaboration, Guillaume demonstrated a strong sense of ownership, the ability to operate autonomously, and clear communication with both users and technical teams. He remained dependable and effective under pressure, including during critical incidents, and consistently showed initiative in identifying opportunities to improve existing processes.

It is worth highlighting that the conclusion of our collaboration with Guillaume is the result of an internal restructuring of our support operations and is in no way related to the quality of his services or his performance.

We sincerely appreciate Guillaume's contributions to Gamelight and confidently recommend him for opportunities in technical support, support engineering, automation, or operations. We believe he would be a valuable addition to any organisation looking for someone who combines strong operational capabilities with technical initiative and a proactive approach to problem-solving.

We wish him every success in his future professional endeavours.

Kind regards,

Georgiana Fotache
